

📖 CharityDOG (\$cDOG) – Official Whitepaper v1.0

A crypto asset with heart on the Cardano blockchain

Issuer: Sascha Rosteck (commercial business), Oberhausen (Germany) [3.11]

Status: Pre-launch / In preparation

🔥 1. Executive Summary (The vision)

The crypto market is booming, yet many community tokens offer no real long-term incentive to hold. CharityDOG (\$cDOG) breaks this mold. Launched on the highly efficient Cardano blockchain, \$cDOG combines the viral energy of memecoin culture with a game-theoretic reward system. Instead of funneling funds to external institutions, the project's revenue flows directly back to where its heart beats: to our most loyal supporters—the top 69 holders.

💡 3. The 2% "Top 69" Reward Tax (Tokenomics)

The heart of the CharityDOG ecosystem is the 2% trading tax. Whenever \$cDOG is bought or sold on a decentralized exchange (DEX) like Minswap, the tokenomics structure comes into play:

1. 2% of the total trading volume is automatically deducted via the liquidity pool protocol.
 2. These deducted tokens are collected and distributed at regular intervals as an automatic airdrop exclusively to the 69 largest wallet addresses (Top 69 holders).
 3. The gamification effect: Holding more tokens allows you to climb the Top 69 rankings and receive a larger share of the airdrop volume. This creates a constant competition for the top spots and permanently removes liquidity from the market, thereby stabilizing the price.
-

📊 3. TOKENOMICS & ALLOCATION

- 🐾 **Total Supply:** 1,000,000,000 \$cDOG (1 Billion, hard-capped & fixed)
- ⚙️ **Decimals:** 0 (Pure, non-divisible Memecoin Standard)
- 🚀 **50% Public Presale & Community Distribution** (500,000,000 \$cDOG)
- 💎 **20% Permanent Market Liquidity** (Minswap LP Pool)
- 📣 **15% Marketing & Ecosystem Reserve** (CEX Listings, Influencers)
- 🗝️ **15% Team Allocation** (Long-term founder commitment)

🔗 ON-CHAIN REFLECTION MECHANISM

- Every single buy and sell transaction on decentralized exchanges (DEX) carries a strict **2% trading tax**.
- These tokens flow automatically into the secure On-Chain Distribution Wallet.
- **The 10M Milestone:** As soon as the wallet accumulates **10,000,000 \$cDOG**, the food can opens! The tokens are instantly distributed via a batch airdrop to the **TOP 69 HOLDERS** on our live leaderboard.

⚔️ The 69 Arena – Reward Distribution Model

Whenever the On-Chain Distribution Wallet hits the milestone of 10,000,000 \$cDOG, the rewards are automatically unlocked and proportionally distributed across three distinct competitive tiers:

Tier 1: The Alpha Whales (Ranks 1 – 10)

- Allocation: 50% of the reward pool (5,000,000 \$cDOG)
- Individual Reward: Each of the top 10 wallets receives exactly 500,000 \$cDOG per airdrop.

Tier 2: The Pack Leaders (Ranks 11 – 40)

- Allocation: 30% of the reward pool (3,000,000 \$cDOG)
- Individual Reward: Each of these 30 wallets receives exactly 100,000 \$cDOG per airdrop.

Tier 3: The Arena Challengers (Ranks 41 – 69)

- Allocation: 20% of the reward pool (2,000,000 \$cDOG)
 - Individual Reward: Each of these 29 wallets receives exactly 68,965 \$cDOG per airdrop.
-

🔪 4. The Presale & Liquidity Strategy

A public presale will be conducted to fund the token's fair launch.

- **Minimum target (Soft Cap): 20,000 ADA**
- **Maximum target (Hard Cap): 100,000 ADA**
- **Whale Protection: Maximum of 500 ADA allowed per wallet address.**
- **OTC Rescue Clause:** The project management reserves the right to determine whether any remaining shortfall relative to the soft cap should be covered via private OTC (Over-The-Counter) deals with strategic partners—subject to vesting periods—to ensure the exchange launch proceeds. Should it become apparent that the exchange launch cannot be executed, we will honor a "Fairness Pledge" (refund).
- **The Fairness Pledge (Refund):** If the minimum target of 20,000 ADA is not reached within the specified timeframe, the presale will be cancelled. All contributed ADA will be refunded 100% to the originating wallets.

🦊 Allocation of Presale Proceeds

- **Launch Price:** The initial DEX price is set at 0.0006 ADA. Presale participants thus receive an immediate 20% price advantage as a reward for their early confidence.
 - Tokens are added to the Minswap liquidity pool in a quantity that ensures the launch price on Minswap is exactly 0.0006 ADA (presale price + 20%), enabling immediate, stable trading.
 - Excess tokens from the LP and presale reserves will be irrevocably burned.
 - 20%: Retained in the project treasury for technical infrastructure (NMKR, TosiDrop) and taxes.
-

🔗 5. Roadmap

- **Phase 1: Technical infrastructure set up (GitHub landing page, token project registered in NMKR Studio).**
 - **Phase 2: Registration of the German small business, legal compliance/safeguarding.**
 - **Phase 3: Execution of the fair presale, launch of the GitHub website with full legal notice (Impressum).**
 - **Phase 4: Physical minting of the tokens, activation of the Minswap trading pool, distribution via TosiDrop.**
 - **Phase 5: Launch of the ongoing airdrop dashboard.**
-

⚠️ 6. Legal Disclaimer

The CharityDOG Token (\$cDOG) serves exclusively for entertainment, gamification, and community purposes within the Cardano ecosystem. It does not constitute a share, security, financial investment, or voting right in a real-world company.

There is no promise of profit or appreciation in value. Acquisition during the presale is at your own risk. Acquiring crypto tokens entails extreme risks, including the potential total loss of invested capital.

The project management team does not provide financial or investment advice. Purchasers act on their own responsibility and agree that the project management team cannot be held liable for price fluctuations or financial losses.
